

C2_01 Advanced Excel & Power Query - Start Here RC4

Build refreshable analysis without hiding broken inputs

Exact order: AX1 -> matching practice -> protected practice review after attempt -> changed retry. Repeat through AX10. Then Mini-Lab -> Quick Revision -> non-gating Module Test -> protected review -> Gate A. Gate B/C stay hidden until assigned.

Files to open

Stage	File
Teach	01_TEACH/C2_01_ADVANCED_EXCEL_POWER_QUERY_TEACHING_BOOK_ASTRARC4.pdf
Practice	02_PRACTICE/C2_01_PRACTICE_WORKBOOK_RC1.xlsx + practice data ZIP
Mini-Lab	03_MINI_LAB month-end refresh brief + workbook
Revision	01_TEACH/C2_01_QUICK_REVISION_ASTRARC4.pdf
Diagnostic	04_ASSESSMENT/C2_01_MODULE_TEST_ASTRARC4.pdf -> protected review after attempt
Gate	Fresh Gate A workbook/data -> RC4 protected review after attempt

Mastery and runtime boundary

Lesson mastery: reproduce the guided pattern, solve a changed task, validate row/count/value behavior, explain the design without reading, and complete a post-review retry.

Gate mastery: file scope, transformation logic, key quality, merge/append correctness, KPI/Pivot output, reconciliation, failure recovery, release decision and handoff. A critical backup/schema/key/reconciliation failure blocks pass.

Runtime: Power Query and Excel refresh behavior must ultimately be confirmed on a learner Excel installation. Static package QA does not pretend to be native Excel execution.

Course position: Course 2A remains optional and is not a hidden prerequisite for the Course 1 -> C2B -> C3 direct route.
