

C2_01 Module Test - Astra RC4

Non-gating closed-book transfer check

Rule: save a genuine attempt before opening the protected review. This diagnostic does not unlock or block Gate A.

1. AX1

A nested KPI formula works but nobody can audit it. Describe how you would split the logic and validate intermediate results.

2. AX2

A lookup table contains duplicate customer IDs. Explain why changing XLOOKUP to INDEX/MATCH does not solve the business problem.

3. AX3

A FILTER result returns #SPILL!. Give a diagnosis/recovery sequence that preserves a single dynamic formula.

4. AX4

Write the business-rule components needed before building a SUMIFS revenue KPI for Region + Status + Month.

5. AX5

A PivotTable total differs from a control total. Name the checks you run before editing the Pivot.

6. AX6

Design a six-step Power Query pipeline for a monthly CSV and say where type/quality checks belong.

7. AX7

A folder contains current files, an old backup and one schema-drift file. State the source-scope contract and failure behavior.

8. AX8

Explain append vs merge using row grain, then name the test that catches a many-to-many fan-out.

9. AX9

A report path changes by environment. Show why a parameter is safer than editing query steps by hand.

10. AX10

Define the minimum RELEASE checklist for a refreshable monthly management workbook.

11. SYNTHESIS

A refresh completes successfully but row count increased 12%, one dimension key duplicates, and one expected file is missing. Decide RELEASE/BLOCK and give the recovery order.
