

C2_02 Quick Revision - Astra RC4

Closed-book recall before the Module Test. This is not a substitute for runnable PostgreSQL practice.

ID	Mental trigger	Rule	Minimum proof
ASQL1	Join grain	Write both grains/cardinality before join	rows + distinct keys + orphans + totals
ASQL2	Subquery	Prove inner grain before outer use	run inner result independently
ASQL3	CTE architecture	One purpose/grain per named stage	validate each CTE control
ASQL4	Window basics	Rows stay; partition/order define context	compare row count before/after
ASQL5	Rank/running	Tie rule + deterministic order/frame	test ties and frame edges
ASQL6	LAG/LEAD	Neighbor only after valid time grain	check gaps/missing periods
ASQL7	Conditional KPI	Write numerator/denominator in words	reconcile component counts
ASQL8	Dates/time	Use typed half-open boundaries	test exact boundary timestamps
ASQL9	Data quality	Expose duplicates/orphans/nulls	keep exception counts
ASQL10	Debugging	Find first stage where control changes	stage-by-stage row/total checks
ASQL11	EXPLAIN	Correctness first, then plan evidence	avoid unsafe ANALYZE assumptions
ASQL12	Maintainable SQL	Readable stages + controls + handoff	fresh rerun by another analyst
