

C2_03 Quick Revision - Astra RC4

Closed-book recall before the diagnostic Module Test. This does not replace live Power BI Desktop practice.

ID	Mental trigger	Rule	Minimum proof
PBM-A1	Model contract	Process + fact grain + questions before relationships	contract + first controls
PBM-A2	Fact vs dimension	Facts record events; dimensions label/filter unique keys	role/grain/key register
PBM-A3	Star schema	Facts central; conformed dimensions create clear filter routes	star sketch + grain notes
PBM-A4	Filter flow	One-side filter -> relationship -> fact -> measure	tiny propagation tests
PBM-A5	Cardinality/M:M	Fix/understand duplicate one-side keys before bridge/M:M	duplicate + orphan evidence
PBM-A6	Role-playing	One entity can serve multiple report roles; choose active default deliberately	two role tests
PBM-A7	Date dimension	One continuous unique date row; facts attach by declared date roles	continuity + role proof
PBM-A8	Power Query architecture	Source -> staging -> reusable transform -> model-ready	dependency + row/key controls
PBM-A9	Model QA	Reconcile source rows/keys/totals + filter propagation	QA pack + exception list
PBM-A10	Performance	Correctness first; then model shape/cardinality/analyzer; change one thing	before/after parity evidence
