

C2_03 Module Test - Astra RC4

Non-gating diagnostic. Keep the protected review closed until your own attempt is saved.

1. PBM-A1

Before opening Model view, what five items belong in a minimum semantic-model contract?

2. PBM-A2

A supposed dimension contains duplicate business keys. Why is that more than a cosmetic data-cleaning issue?

3. PBM-A3

Why is a clean star schema usually safer than connecting facts directly to one another?

4. PBM-A4

A Region slicer changes one fact but not another. What evidence do you inspect before changing cross-filter direction?

5. PBM-A5

When is many-to-many legitimate, and when is it merely hiding a dirty one-side key?

6. PBM-A6

OrderDate and ShipDate both point to Date. What business decision determines the active/default role?

7. PBM-A7

Name four tests that prove a date dimension is safe for time analysis.

8. PBM-A8

What is the purpose of staging vs model-ready Power Query layers, and what should stay traceable?

9. PBM-A9

Name five independent controls you would require before releasing a semantic model.

10. PBM-A10

A report is slow. Why should you establish result parity before changing model shape or relationships?

Submission

Save a genuine closed-book attempt plus one relationship/filter test and one reconciliation control. This diagnostic identifies repair targets only; it cannot unlock or block Gate A.
