

C2_04 Quick Revision - Astra RC4

Closed-book recall before the diagnostic Module Test. This does not replace runnable DAX, interaction, accessibility or RLS evidence.

ID	Mental trigger	Rule	Minimum proof
DAX1	Evaluation context	A measure answers once inside the current filter envelope	predict + slicer/detail/total test
DAX2	Row vs filter	Row context points at rows; filter context restricts values	iterator vs measure explanation
DAX3	CALCULATE	Modify filter context, then re-evaluate expression	state filter replacement/add/remove
DAX4	Iterators	Table -> row expression -> aggregate	prove input row grain
DAX5	Context transition	Row values can become filters through CALCULATE/measure	trace transitioned filters
DAX6	Time intelligence	Shift a valid Date-table context then reuse base measure	boundary + date continuity proof
DAX7	Period/rolling	Define window and partial-period policy before percent	window start/end + parity
DAX8	Variables	Named intermediate values improve reasoning/debugging	return/test each VAR
DAX9	Business measures	Contract numerator/denominator/blank/total first	component reconciliation
DAX10	Debugging	Freeze wrong cell and find first intermediate divergence	detail/subtotal/total regression
DAX11	Storytelling	Decision -> KPI -> trend -> driver -> exception -> action	one-sentence page narrative
DAX12	Interactions	Every navigation has context cue + return/reset path	drill/tooltip/bookmark tests
DAX13	Accessibility	Meaning survives without color/hover/mouse	contrast + alt + tab order + visible text
DAX14	RLS	Identity -> mapping/role -> dimension -> facts	View as + real identity edge tests
DAX15	Lifecycle	Publish/share/refresh/change are operational controls	owner + access + refresh + rollback
