

C2_04 Module Test - Astra RC4

Non-gating diagnostic. Save your own attempt before opening the protected review.

1. DAX1

Why can one measure return different correct values in two matrix cells without its formula changing?

2. DAX2

What is the practical difference between row context and filter context?

3. DAX3

Explain CALCULATE without using the phrase “magic DAX function.”

4. DAX4

When is SUMX necessary, and what grain check comes first?

5. DAX5

What is context transition and where can it appear implicitly?

6. DAX6

What model/date conditions must be true before trusting standard time intelligence?

7. DAX7

Why can a rolling 3-month or YoY metric be wrong at partial-period boundaries?

8. DAX8

What debugging advantage do VAR/RETURN provide, and what is fixed when a variable is evaluated?

9. DAX9

Write the five-part contract for a rate/ratio business measure before DAX syntax.

10. DAX10

A grand total is wrong while rows look right. What evidence sequence do you inspect?

11. DAX11

What makes an executive page decision-first rather than a gallery of visuals?

12. DAX12

How do you test that a bookmark/drillthrough experience preserves or intentionally resets context?

13. DAX13

Name four ways a report must communicate critical meaning without relying on color or hover.

14. DAX14

What evidence proves dynamic RLS for a user mapped to more than one region/team/area?

15. DAX15

What operational controls must exist after publishing before calling the report released?

Submission

Save a genuine closed-book attempt plus one tested DAX/context example and one report/security/lifecycle test. This diagnostic diagnoses repair targets only; Gate A remains governed by lesson mastery + Mini-Lab.
