

C2_05 Closed-Book Practical Mastery Check - RC4

Non-gating diagnostic. Save your attempt before protected review; this test does not unlock or block Gate A.

ID	Transfer task
PYA1	Sketch a clean-start script contract for a weekly folder-to-report process.
PYA2	Split discovery, loading, transform, validation and writing into function contracts.
PYA3	Given date/numeric drift, state parsing policy and reconciliation evidence.
PYA4	Design deterministic file discovery that rejects backup/malformed files and preserves lineage.
PYA5	Describe an Excel round-trip validation that proves the delivered workbook matches the validated DataFrame.
PYA6	Flatten nested JSON without multiplying parent-level values; state the declared row grain.
PYA7	Write the reliability controls around a GET request: timeout, status, payload and exception categories.
PYA8	Show one exception that should be handled locally and one that should stop publication.
PYA9	Design a structured validation record and log entries for one failed key-integrity check.
PYA10	Prove an unchanged rerun will not duplicate the business output.
PYA11	List the minimum run-manifest evidence another analyst needs to reproduce the result.

Evidence

Save the attempt, code/pseudocode, validation logic and own-words explanation. Do not open the protected review until the genuine attempt exists.
