

C2_05 Practical Mastery Check - Protected Review RC4

Open only after the saved diagnostic attempt. Review the pattern, close this file, then complete a changed fresh retry.

Worked-control pattern

Area	What a strong answer demonstrates
Scope / lineage	Expected inputs are declared before discovery; included/excluded files are explainable and rows carry source lineage.
Schema / keys	Required columns/types are checked; malformed values and duplicate master keys are surfaced before enrichment.
Merge / totals	Cardinality is asserted; unmatched keys remain visible; row counts and key business totals reconcile before/after merge.
Errors / logs	Specific errors carry context; logs describe stages; validation records are machine-readable and critical failures stop release.
Rerun / manifest	Same approved inputs do not append duplicate business rows; environment/input/output/version evidence is recorded.

Changed retry

Close this review. Use a different file set/domain and prove the same controls without copying the original answer. Keep first attempt, review diagnosis and changed-retry evidence as three separate artifacts. This diagnostic remains non-gating.
