

C2_06 Data Warehousing & Platform Foundations - Start Here RC4

Astra-parity route. Concepts are vendor-neutral; Fabric references are implementation/visual companions.

Step	Action
1	Read DWF lesson and reproduce the worked grain/history/layer/lineage reasoning in the practice workbook.
2	State business process and grain before tables/joins; separate facts for separate processes or higher-grain targets.
3	For history, write business key, surrogate key, effective interval and fact-date lookup rule; surface unknown foreign keys.
4	FleetCare Mini-Lab -> Quick Revision -> optional non-gating Module Test.
5	Gate A Logistics; Gate B E-commerce Returns and Gate C Clinic Appointments are fresh remediation reassessments only when assigned.

Protection rule

Save a genuine attempt before protected review. Close the review, complete a changed fresh retry, and save the new evidence separately.

Runtime boundary

Static QA validates the modeling fixtures, calculations, documents, routes and source mappings. Native Fabric/cloud UI, capacity, pipelines and account behavior remain environment-dependent.
