

C2_06 Closed-Book Practical Mastery Check - RC4

Non-gating diagnostic. Save a genuine attempt before protected review; Gate A eligibility is unchanged.

ID	Transfer task
DWF1	Choose an operational vs analytical placement for a high-write order system and a 3-year BI trend workload.
DWF2	Explain why the same normalized OLTP schema is not automatically the best reporting model.
DWF3	Define the warehouse promise for repeatable historical analysis.
DWF4	Model two business processes plus a higher-grain target without mixing grains.
DWF5	Show business key vs surrogate key through one source-system identifier change.
DWF6	Design a Type 2 history interval and point-in-time fact lookup.
DWF7	Choose ETL or ELT for a changed scenario and justify replay/governance trade-offs.
DWF8	Place raw, standardized and business-ready data in explicit layers with promotion controls.
DWF9	Choose warehouse, lake or lakehouse from workload/governance needs rather than fashion.
DWF10	Choose batch or streaming from freshness/state/cost requirements.
DWF11	Trace lineage from source record to executive KPI and name metadata required to explain it.
DWF12	Classify quality checks by severity/owner and define what blocks publication.

Evidence

Keep the model/grain/history/layer/lineage/control decisions and own-words defense. This is a diagnostic, not a replacement Gate.
