

C2_06 Practical Mastery Check - Protected Review RC4

Open only after a saved diagnostic attempt; close this file before changed retry.

Strong reasoning pattern

Area	Required reasoning
Process / grain	Separate business processes at declared grains; do not solve grain conflicts with accidental joins.
Keys / history	Business and surrogate keys have distinct roles; Type 2 intervals do not overlap and fact rows resolve by event date.
Targets / unknowns	Higher-grain targets stay independent; unknown dimension keys are surfaced and have a controlled warehouse treatment.
Layers / platform	ETL/ELT, staging/curation/presentation, store and latency decisions follow requirements with replay/recovery logic.
Lineage / quality	Lineage reaches the consuming KPI; checks have severity, owner/action and blocking behavior.

Changed retry

Close this review and solve a new domain with different facts/history/targets. Save first attempt, review diagnosis and changed fresh retry separately. The diagnostic remains non-gating.
