

C2_08 Practical Mastery Check - RC4

Closed-book, non-gating diagnostic. Save first attempt before opening its protected review.

Task	Fresh prompt
1	A stakeholder asks for "top 10 worst customers." Write the discovery questions needed before any ranking.
2	Rewrite an unsafe request so the business decision, metric definition and decision owner are explicit.
3	Given three competing analytics requests, build a priority rule that includes impact, urgency, evidence confidence and hard constraints.
4	Write one observation, two plausible inferences and one recommendation from the same result without confusing them.
5	Draft a five-line executive summary with headline, evidence, implication, uncertainty and decision ask.
6	Show how you would communicate a high-impact unknown that could reverse the recommendation.
7	Turn "monitor churn" into an action contract with owner, timing, measure and review/stop condition.
8	Resolve a Finance vs Sales definition conflict without silently averaging or choosing one side.
9	Create a defense map for a recommendation whose causal evidence is weak.
10	Write a cross-functional handoff for a KPI definition change requiring data engineering and finance approval.
11	List the minimum documentation another analyst needs to reproduce and safely review your change.
12	Review a junior analyst conclusion that overclaims causality; give a coaching question, not the final answer.

Evidence

Save your response, assumptions, unresolved questions, owners, validation/review conditions and own-words explanation. This test does not unlock or block Gate A.
