

C2_08 Practical Mastery Check - Protected Review RC4

Open only after a saved genuine attempt; diagnose, close, then solve a changed retry.

Task	Expected reasoning pattern
1	Ask decision/audience, definition of "worst," eligible population/time window, evidence available, costs/risks, constraints, action capacity and who owns the ranking/action.
2	State the business decision first, define the metric and population/time grain, then name the person who chooses the trade-off.
3	Use an explicit scoring/triage rule; non-negotiable risk/finance/security controls can override a simple score.
4	Observation must be directly supported; inference states an explanation plus alternatives; recommendation states an action bounded by evidence.
5	Lead with the decision-relevant headline, then only enough evidence, implication, material uncertainty/trade-off and the specific decision required.
6	Name the unknown, why it matters, current safe decision boundary, evidence owner/timing and what threshold/result would change the recommendation.
7	Specify the action, accountable owner, when, intended direction of impact, risk/trade-off, success measure and review/stop rule.
8	Keep both governed purposes/definitions visible, propose labeled alternatives or separate metrics, and route the unresolved policy trade-off to the authorized owner.
9	Tie claim to evidence; state assumptions/causal limits; list likely challenge, what evidence is missing and the revision trigger.
10	Define old/new KPI rule, source/interface change, owner per team, acceptance tests, effective date, rollback/failure path and communication.
11	Purpose, inputs/outputs/grain, code/query/version, assumptions, validation/reconciliation, reviewer decision, change log and release evidence.
12	Ask the learner what evidence establishes causality, what alternatives exist and how the wording should change if only association is known; require a changed retry and teach-back.

Changed retry

Close this review. Solve an equivalent management case in a different domain with new evidence, a stakeholder conflict and one material uncertainty. Save separately. Module Test remains non-gating.
