

C2_09 Core Quick Revision - RC4

Retrieval support after study; not a replacement for CAP evidence or the Final Gate.

Lesson	Anchor	Minimum proof
CAP1	Decision contract	Owner/audience -> definitions -> scope/grain -> open questions -> acceptance
CAP2	Source receipt	Role + grain + freshness + owner + quality risk before acquisition
CAP3	Controlled SQL funnel	Declare output grain -> joins/filters/windows -> independent reconciliation
CAP4	Workbench choice	Ownership + repeatability + testability + handoff decide SQL/PQ/Python
CAP5	Traffic-lane model	Facts -> dimensions -> date roles -> relationships -> measures; stop fan-out
CAP6	Evidence courtroom	Baseline -> segments -> hypotheses -> alternatives -> decision evidence
CAP7	Decision control panel	Overview -> trend -> drivers -> exceptions -> action; no decorative visual
CAP8	Three independent scales	Raw -> transformed/model -> report; mismatch stops release
CAP9	Decision packet	Headline -> evidence -> implication -> action/owner -> limitation/next evidence
CAP10	Emergency handover	Inputs/grain -> logic -> lineage -> validation -> runbook -> known issues
CAP11	Design review	Choice -> requirement/evidence -> alternative -> failure -> change trigger
CAP12	Evidence index	Interview claim -> real artifact/decision/validation/failure -> truth boundary
CAP13	Capability balance sheet	Repeated impact + ownership -> gaps -> specific next-scope ask
CAP14	Claim-to-proof match	Role requirement -> evidence -> portfolio story -> gap -> apply/skip

Senior proof

Can you rebuild the analysis path, reconcile the important number independently, explain a failure/recovery path, separate observation from causality, name an owner and limitation, and hand the work to another analyst?
