

C2_09 Core Practical Mastery Check - RC4

Closed-book, non-gating diagnostic. Save the first attempt before opening its protected review.

Task	Fresh prompt
1	Turn a vague executive request into a decision contract with owner, scope, definitions, grains and acceptance tests.
2	Given six candidate sources, create a source inventory that decides acquire/skip using role, grain, freshness and quality risk.
3	Write the validation contract for a SQL dataset whose output grain is Month-Region-CustomerSegment.
4	Choose SQL, Power Query or Python for a recurring transformation and defend ownership, repeatability, testability and handoff.
5	Sketch a semantic model with two facts, role-playing dates and a shared customer dimension without fact-to-fact fan-out.
6	A segment is declining. Separate baseline fact, hypotheses, alternative explanations and the evidence needed before intervention.
7	Design a three-page decision report: executive overview, driver analysis and exception/action page. State the decision served by each.
8	Create a reconciliation plan that independently checks raw control, transformed/model output and report KPI before release.
9	Write an <=8-line executive recommendation with evidence, owner, action, material uncertainty and next evidence.
10	List the minimum handover package another analyst needs to reproduce, review and safely rerun your analysis.
11	Defend one technical choice by naming requirement, evidence, rejected alternative, failure mode and change trigger.
12	Prepare one interview story using only evidence you personally produced; state the boundary of your ownership.
13	Build a promotion evidence matrix that shows repeated impact/ownership and one real gap requiring next-scope experience.
14	For a target senior BI role, map each important requirement to proof, honest gap or apply/skip decision.

Evidence

Save your response, assumptions, validation/reconciliation, one failure/recovery path, limitations and own-words explanation. This diagnostic does not unlock or block Final Gate A.
