

C2-00 Senior Analyst Foundations - Start Here

Begin here before SAF1

WHY THIS MODULE EXISTS

Course 1 taught you to produce analyst outputs. C2-00 teaches the senior control layer: clarify what decision the output supports, define the metric and grain, validate independently, communicate uncertainty, and leave a handoff another analyst can inherit.

EXACT ORDER

1. Teaching Book SAF1. 2. Matching SAF1 workbook sheet. 3. Save genuine attempt. 4. Validate and explain back. 5. Open protected practice review only after attempt. 6. Close review and complete changed retry. 7. Repeat through SAF8. 8. Mini-Lab. 9. Gate A. 10. Targeted repair if needed. Gate B/C only when explicitly assigned.

FILES TO OPEN

Teaching Book -> Practice Workbook -> Mini-Lab PDF + Workspace -> protected Practice Review -> Gate A workbook -> Gate A Review after attempt -> targeted remediation if needed.

FILES NOT TO BROWSE

Do not open Gate B/C or protected reviews early. Do not use external videos to solve protected assessments. Do not treat a workbook cell being filled as mastery.

C2-00 prerequisite / tools

Everything new is still taught from first principles

COURSE 1 KNOWLEDGE ASSUMED

Small-table cleaning/filtering; basic Excel/SQL/Power BI analysis; simple metrics; basic joins; ability to save and explain your work. Repair only missing Course 1 skills. C2-00 does not silently reteach all of Course 1.

TOOLS REQUIRED

A spreadsheet application is enough for this module. No paid software, Fabric tenant, database server, or certification is required. External videos are optional/recommended support and never required for completion.

OPTIONAL-PATH BOUNDARY

Course 2A is the Senior / BI Analyst depth path. It is optional. The direct DA -> DE route remains Course 1 -> Course 2B Bridge -> Course 3 after the required exit competencies are met. Skipping Course 2A must never be treated as a failure or hidden prerequisite.

C2-00 mastery and Gate rules

No percentage gaming

LESSON MASTERY

Genuine attempt + independent fresh task + validation + explain-back + post-review changed retry. Recognition, copying, or a filled workbook is insufficient.

GATE PASS

Competency floor, not raw percentage: scope; metric/definition; grain/source; assumptions/judgment; validation; handoff. Any unresolved critical failure blocks pass even if other parts are strong.

RETEST

Repair only the weak competency first. Gate B and C are fresh reassessments with different domains/data and remain protected until assigned. Never automatically open the next Gate just because Gate A was attempted.
