

C2-00 Gate C Protected Review

Subscription Billing - open only after the independent attempt is saved

OBJECTIVE FIXTURE CHECKS

raw rows = 85 | unique rows = 84 | paid unique = 56 | failed unique = 14 | paid amount = 182829.1

WHAT THIS GATE IS REALLY TESTING

Renewal / plan-change decision. A strong attempt notices that billing-cycle rows are not automatically customer-renewal events and calibrates any plan recommendation to the available evidence. The goal is not to guess one preselected KPI. The goal is to create a defensible contract, analyze only what that contract permits, validate materially, and defend the business recommendation.

CRITICAL FAILURES

Silent definition invention; unresolved row-grain or denominator conflict; duplicated data left uncontrolled; no independent reconciliation for a material result; fabricated owner/evidence; recommendation stronger than the evidence; opening this protected review before the saved attempt.

Gate C competency review

Repair the failed competency, not the whole course

COMPETENCY CHECK

1. Decision/scope - decision, audience, time window, and exclusions are explicit. 2. Metric contract - meaning, numerator/denominator or population, time basis, owner, source, and version are defensible. 3. Grain/source - one-row meaning and duplicate/unmatched risks are controlled. 4. Judgment - fact/assumption/risk/limitation are separated and recommendation strength matches evidence. 5. Validation - at least one independent control plus key/population/segment checks; failed checks have recovery. 6. Handoff/defense - another analyst can reproduce the work and you can explain what would change the conclusion.

PASS PHILOSOPHY

No percentage gaming. A learner may be strong in five areas and still fail if one unresolved critical definition/grain/validation weakness makes the recommendation unsafe. Repair only the weak competency and prove it on changed evidence.

NEXT ROUTE

If instability remains, route to a diagnostic/repair plan rather than recycling A or B.
