

C2-00 Protected Practice Review

OPEN ONLY AFTER A GENUINE ATTEMPT

HOW TO USE THIS REVIEW

Compare structure, not wording. Mark which competency failed, close the review, then solve the changed retry in the workbook. Do not copy this review into your evidence. A reviewed answer is not a mastered answer.

STRONG C2-00 ARTIFACT

Decision explicit; scope bounded; metric contract versioned; grain and source-of-truth named; open questions have owners; assumptions/risks/limitations separated; validation uses an independent control; recommendation strength matches evidence; handoff is executable.

CRITICAL FAILURES

Silent definition invention; unresolved grain conflict; fabricated owner/evidence; missing independent reconciliation for a material metric; recommendation stronger than evidence; opening protected material before saving the attempt.

SAF1 protected review signals

Close this page before the changed retry

STRONG SIGNAL

A short decision-protection checklist. It names the decision, definition, grain/source, validation check, and unresolved item before chart design begins.

IF YOUR ATTEMPT LOOKED LIKE THIS, REPAIR IT

Starting with chart colours or formulas. | Treating the stakeholder's wording as a complete specification. | Calling yourself 'senior' because you used an advanced tool. | Hiding an unresolved definition so the work looks finished.

CHANGED RETRY

Changed retry: 'Send a customer-retention deck by 4 PM.' Write the decision-protection checklist without referring to the refund scenario.

SAF2 protected review signals

Close this page before the changed retry

STRONG SIGNAL

A one-page analysis brief where a colleague could tell exactly what is being answered and what remains out of scope.

IF YOUR ATTEMPT LOOKED LIKE THIS, REPAIR IT

Using 'sales' without defining gross vs net. | Comparing unequal time windows. | Adding every possible segment instead of the ones relevant to the decision. | Letting the deadline force silent assumptions.

CHANGED RETRY

Changed retry: 'Delivery is slow.' Scope the decision, period, metric, grain, population, exclusions, sources and acceptance test.

SAF3 protected review signals

Close this page before the changed retry

STRONG SIGNAL

A meeting agenda and decision log with questions tied to analytical impact, named owners, status, and deadline.

IF YOUR ATTEMPT LOOKED LIKE THIS, REPAIR IT

Asking questions whose answers cannot change the work. | Recording an answer without the owner who approved it. | Leaving 'TBD' items with no deadline. | Treating silence as approval.

CHANGED RETRY

Changed retry: Support and Product disagree on when a ticket is 'resolved'. Prepare a five-question clarification meeting and decision log.

SAF4 protected review signals

Close this page before the changed retry

STRONG SIGNAL

A metric contract where another analyst could implement the same KPI without guessing hidden rules.

IF YOUR ATTEMPT LOOKED LIKE THIS, REPAIR IT

Writing only the formula. | Ignoring the denominator of a rate. | Using dashboard label as definition. | Changing a metric silently when the source changes.

CHANGED RETRY

Changed retry: Build a metric contract for 'First Contact Resolution Rate'. Do not reuse the On-time Delivery wording.

SAF5 protected review signals

Close this page before the changed retry

STRONG SIGNAL

A source/grain register plus a small lineage chain. Every table has a declared row meaning and key.

IF YOUR ATTEMPT LOOKED LIKE THIS, REPAIR IT

Calling a file 'customer level' when it actually has multiple rows per customer. | Choosing source of truth because it is easiest to access. | Assuming a primary key without checking duplicates. | Using DISTINCT to hide duplicated joins.

CHANGED RETRY

Changed retry: Model customer, subscription, invoice, payment_event and monthly_target grains before any joins.

SAF6 protected review signals

Close this page before the changed retry

STRONG SIGNAL

A decision note where evidence strength is obvious and the reader knows what could change the conclusion.

IF YOUR ATTEMPT LOOKED LIKE THIS, REPAIR IT

Calling an assumption a fact. | Using 'probably' without naming the uncertainty. | Listing limitations but ignoring them in the recommendation. | Giving an irreversible action from weak evidence.

CHANGED RETRY

Changed retry: A new dashboard shows conversion improved, but tracking coverage changed. Separate evidence classes and define a trigger.

SAF7 protected review signals

Close this page before the changed retry

STRONG SIGNAL

A validation plan with expected values or control methods, observed result, tolerance, status, and recovery path.

IF YOUR ATTEMPT LOOKED LIKE THIS, REPAIR IT

Validating with the same formula that produced the result. | Ignoring a small mismatch without an agreed tolerance. | Fixing the data silently instead of recording the cause. | Treating 'no error message' as validation.

CHANGED RETRY

Changed retry: Design validation for a monthly inventory-availability KPI with at least six different failure checks.

SAF8 protected review signals

Close this page before the changed retry

STRONG SIGNAL

A new analyst can reproduce the normal run and recognize a failure without asking you what each step means.

IF YOUR ATTEMPT LOOKED LIKE THIS, REPAIR IT

Writing 'refresh data' without naming the source or expected timing. | Documenting only the happy path. | Leaving metric definitions inside your head. | Putting passwords or secrets into documentation.

CHANGED RETRY

Changed retry: Write a handoff for a weekly operations report with a deliberately failed source refresh path.
