

Remediation Card 1 - Scoping weakness

Use only after a genuine weak attempt

WHEN TO USE

You calculated before defining the decision or scope.

TARGETED REPAIR

Fresh task: 'Costs are high.' Build decision, audience, period, metric, grain, exclusions, source, acceptance. Stop before calculation.

PASS SIGNAL

Pass when another analyst can implement the same scope without guessing.

Remediation Card 2 - Metric / grain weakness

Use only after a genuine weak attempt

WHEN TO USE

You used a label or join without a complete contract.

TARGETED REPAIR

Fresh task: define 'Active Customer Rate' and declare customer, order, event and monthly-target grains. Predict any join fan-out.

PASS SIGNAL

Pass when numerator/denominator/time/grain/source/version are explicit and joins have row-grain controls.

Remediation Card 3 - Validation weakness

Use only after a genuine weak attempt

WHEN TO USE

Your result ran but was not independently proven.

TARGETED REPAIR

Fresh task: design six checks for a revenue report: coverage, duplicate key, unmatched key, control total, alternate recompute, invariant + recovery.

PASS SIGNAL

Pass when at least one check is independent and every failed control has a recovery route.

Remediation Card 4 - Judgment / handoff weakness

Use only after a genuine weak attempt

WHEN TO USE

You mixed facts and assumptions or left fragile documentation.

TARGETED REPAIR

Fresh task: rewrite the recommendation with F/A/R/L/REC labels, trigger, run steps, validation, limitation, owner and escalation.

PASS SIGNAL

Pass when decision language matches evidence and another analyst could safely inherit the process.
