

C2-00 Module QA Report

Senior Analyst Foundations - beginner-first RC1 - 2026-09-10

VERDICT

PASS for the available module-level static, render, spreadsheet and archive checks. This is a release candidate module, not the final Course 2A release. The package is allowed to become the C2-00 rebuild baseline only after its final byte manifest and ZIP CRC pass.

TEACHING CONTRACT

Eight lessons are rebuilt into a 39-page teacher-led book. Each lesson uses the full M01 grammar and a lesson-specific worked example, fresh transfer task, recovery ladder, validation, explain-back and changed retry. The old compressed template is not used as the learner-facing body.

PAGINATION / ROUTES

The new Contents page is generated from the fixed final page plan: SAF1 6, SAF2 10, SAF3 14, SAF4 18, SAF5 22, SAF6 26, SAF7 30, SAF8 34. Practice and protected-review routes are recorded in the canonical lesson route registry.

SOURCE DESIGN

Five external lesson assignments across four unique URLs were independently rechecked on the web on 2026-09-10. All external media is support only; zero assessment or mastery path requires an external link.

C2-00 QA evidence

What was actually checked

PDF QA

8 PDFs / 63 pages rendered at 200 DPI. All contact sheets were visually inspected. No clipping, overlap, broken glyph, malformed page, or page-number drift was observed. pdf_preflight returned zero warnings across all eight PDFs.

WORKBOOK QA

Practice, Mini-Lab and Gate A/B/C workbooks reopen through artifact_tool: 5/5 PASS. Formula/error scans return zero matches. Representative teaching, raw-data, validation, submission and mastery sheets were rendered and visually inspected.

ASSESSMENT FRESHNESS

Gate A = Food Delivery Operations, Gate B = Clinic Scheduling, Gate C = Subscription Billing. Each uses different data, identifiers and definition traps. B/C are protected full reassessments and a repair never automatically unlocks the next Gate.

RELEASE BOUNDARY

No shared GitHub or backup was overwritten. The full Course 2A Mentor and later modules remain unrebuilt in this chat, so Course 2A itself is not FINAL. C2-00 has no required live Power BI/PostgreSQL/Fabric dependency.
