

C2-01 Gate B Protected Review

Healthcare Supply Replenishment - open only after saved independent attempt

OBJECTIVE FIXTURE CONTROLS

approved files=3 | approved rows=90 | completed rows=69 | completed gross=243661.24 | duplicate key=V03 | unmatched key=V98 | backup contribution must be 0

STRONG ATTEMPT SIGNAL

Vendor/replenishment escalation: the learner defines the decision/KPI, filters source scope deliberately, preserves file lineage, detects the dirty master key before merge, surfaces the unmatched key, prevents fact-row multiplication, reconciles material totals, and records a defensible BLOCK/RELEASE decision.

CRITICAL FAILURES

Including the backup because it is in the folder; silently dropping the drift file without a source-contract decision; merging before testing key uniqueness; hiding unmatched keys; accepting changed fact row counts/totals; publishing after a failed material reconciliation; using this protected review before saving the attempt.

Gate B competency routing

Repair only the weak competency

COMPETENCY FLOORS

1 File scope & lineage: expected vs actual files, deliberate exclusions, Source.Name or equivalent lineage. 2 Formula/Pivot reasoning: KPI contract and appropriate aggregation. 3 Power Query: repeatable import/combine/transform. 4 Key/grain safety: unique dimension key before merge, unmatched handling, no fan-out. 5 Validation: independent row/total checks and refresh proof. 6 Release/handoff: BLOCK/RELEASE decision, recovery and inheritable runbook.

PASS PHILOSOPHY

No percentage gaming. A polished workbook does not compensate for one unresolved critical source, key, grain or reconciliation failure. Mastery requires changed evidence after repair.

NEXT ROUTE

Gate C is a different field-service full reassessment and stays hidden until explicitly assigned.
