

C2-01 Module QA Report

Advanced Excel & Power Query - beginner-first RC1 - 2026-09-10

VERDICT

PASS for available module-level static, render, workbook-import, formula scan, archive CRC and route checks. This is a module release candidate only; Course 2A remains NOT FINAL.

LEARNER-FACING REBUILD

10 lessons rebuilt into a 47-page book using the full M01 teaching grammar. Contents page and actual starts reconcile 10/10: AX1 p6, AX2 p10, AX3 p14, AX4 p18, AX5 p22, AX6 p26, AX7 p30, AX8 p34, AX9 p38, AX10 p42.

PRACTICE / DATA

Practice workbook + 21-file practice-data archive + month-end Mini-Lab. Five XLSX learner/assessment workbooks re-import with artifact_tool; formula-error scan = zero matches. Representative workbook renders were visually inspected.

RUNTIME HONESTY

Hands-on Excel/Power Query behavior is not claimed from static files. XLOOKUP/dynamic-array/Power Query runtime must be executed on a supported learner PC before FINAL certification.

C2-01 QA - assessments and sources

Fresh Gates and video/reference controls

GATE FRESHNESS

Gate A Marketplace Sellers, B Healthcare Supply Replenishment, C Field Service Parts. Each has different IDs/data plus an unexpected backup, schema-drift path, duplicated dimension key and unmatched fact key. B/C remain protected full reassessments.

CRITICAL-FAIL RULE

Any uncontrolled backup ingestion, silent schema omission, merge fan-out, unexplained unmatched critical key, material reconciliation mismatch, or publication despite a failed critical control blocks Gate pass regardless of other marks.

SOURCE REGISTRY

19 exact lesson/source rows across 11 unique external URLs. Chandoo video titles/timestamps and current Microsoft Excel/Power Query references were rechecked on the web 2026-09-10. External required dependencies = 0.

NO FILLER

Videos are used only for formulas/XLOOKUP/Pivot/Power Query visualization. Key quality, grain, file scope, reconciliation, failure recovery and release judgment remain fully taught internally.

C2-01 QA - render and release boundary

What was actually observed versus still pending

PDF QA

8 PDFs / 74 pages rendered at 200 DPI before this QA report. Five contact sheets were inspected. No clipping, overlap, broken glyph or page-number drift was observed. Preflight shows all eight PDFs openable, unencrypted and text-based.

WORKBOOK VISUAL QA

Mastery tracker, AX7 folder practice, Mini-Lab release log, Gate A task sheet and Gate A validation sheet were rendered from artifact_tool output and visually inspected. Layout is readable with wrapped text and bounded columns.

PARALLEL-BUILD BOUNDARY

No shared GitHub repository or backup has been overwritten. Unified Mentor rebuild waits for the rebuilt Course 2A module registry so the app cannot point at old page/file routes.

NEXT CHECKPOINT

Freeze C2-01 package bytes, test ZIP CRC and re-extracted byte parity, then rebuild C2-02 Advanced SQL from the frozen canonical lesson registry.
