

C2-02 Protected Practice Review

OPEN ONLY AFTER THE MATCHING SQL ATTEMPT IS SAVED

HOW TO USE

Do not copy a query from this review into your attempt. Compare your grain, stage logic and validation against the signals below. Preserve the original query, close this review, and solve the changed retry from memory/reasoning.

CRITICAL FAILURES

Wrong or unstated grain; unexplained fan-out; orphan rows lost unintentionally; denominator mismatch; unsafe date boundary; validation that merely repeats the same logic; DISTINCT used to hide a defect; performance tuning before correctness; protected review opened before attempt.

MAIN LAB OBJECTIVE CONTROLS

Raw lab contains 120 orders, 240 item rows, 32 return rows and 312 event rows. These are fixture checks, not lesson answers; use them to detect setup corruption only.

ASQL1 protected review signals

Close this page before the changed retry

Strong signal

Input/output grain is explicit; right/left key behavior is measured; fan-out or orphan rows are surfaced; DISTINCT is not used as an unexplained repair.

IF YOUR QUERY RAN BUT YOU CANNOT PROVE THIS

Treat the skill as Developing. A plausible SQL result without independent row/key/total evidence is not senior-level mastery.

Changed retry

Subscription + invoice-line case: one row per subscription with billed value.

ASQL2 protected review signals

Close this page before the changed retry

Strong signal

Every inner query has a stated shape and is run independently; scalar subquery returns one value; aggregation grain matches the business question.

IF YOUR QUERY RAN BUT YOU CANNOT PROVE THIS

Treat the skill as Developing. A plausible SQL result without independent row/key/total evidence is not senior-level mastery.

Changed retry

Use EXISTS to find customers with at least one qualifying event.

ASQL3 protected review signals

Close this page before the changed retry

Strong signal

Named CTE stages each have one responsibility and a saved row/key/total control. Repeated filters are centralized.

IF YOUR QUERY RAN BUT YOU CANNOT PROVE THIS

Treat the skill as Developing. A plausible SQL result without independent row/key/total evidence is not senior-level mastery.

Changed retry

Refactor a nested report into source_scope -> customer_week -> ranked -> final.

ASQL4 protected review signals

Close this page before the changed retry

Strong signal

Window result keeps base rows; PARTITION BY matches the business group; one partition is checked with GROUP BY.

IF YOUR QUERY RAN BUT YOU CANNOT PROVE THIS

Treat the skill as Developing. A plausible SQL result without independent row/key/total evidence is not senior-level mastery.

Changed retry

Ticket rows plus team-average resolution time.

ASQL5 protected review signals

Close this page before the changed retry

Strong signal

Tie policy and deterministic order are written; running total uses an explicit frame when needed; one partition is manually checked.

IF YOUR QUERY RAN BUT YOU CANNOT PROVE THIS

Treat the skill as Developing. A plausible SQL result without independent row/key/total evidence is not senior-level mastery.

Changed retry

Top two products per region with a deliberate tie.

ASQL6 protected review signals

Close this page before the changed retry

Strong signal

Data is reduced to the intended time grain before LAG/LEAD; first/missing periods are distinguished from zero.

IF YOUR QUERY RAN BUT YOU CANNOT PROVE THIS

Treat the skill as Developing. A plausible SQL result without independent row/key/total evidence is not senior-level mastery.

Changed retry

Weekly support volume with one missing week.

ASQL7 protected review signals

Close this page before the changed retry

Strong signal

Numerator and denominator are visible, independently validated and use the approved population. The rate is calculated last.

IF YOUR QUERY RAN BUT YOU CANNOT PROVE THIS

Treat the skill as Developing. A plausible SQL result without independent row/key/total evidence is not senior-level mastery.

Changed retry

Refund rate with a different exclusion rule.

ASQL8 protected review signals

Close this page before the changed retry

Strong signal

Typed timestamps/dates, half-open boundaries and reporting time-zone assumptions are explicit. Boundary rows are tested.

IF YOUR QUERY RAN BUT YOU CANNOT PROVE THIS

Treat the skill as Developing. A plausible SQL result without independent row/key/total evidence is not senior-level mastery.

Changed retry

Weekly local-time buckets from timestamptz events.

ASQL9 protected review signals

Close this page before the changed retry

Strong signal

Different failure classes return actual exception rows: duplicate, null, orphan, range and unexpected category; raw evidence is preserved.

IF YOUR QUERY RAN BUT YOU CANNOT PROVE THIS

Treat the skill as Developing. A plausible SQL result without independent row/key/total evidence is not senior-level mastery.

Changed retry

Subscription/billing quality investigation.

ASQL10 protected review signals

Close this page before the changed retry

Strong signal

The first broken stage is identified using rows/distinct keys/control totals; repair targets the cause and all controls rerun.

IF YOUR QUERY RAN BUT YOU CANNOT PROVE THIS

Treat the skill as Developing. A plausible SQL result without independent row/key/total evidence is not senior-level mastery.

Changed retry

Debug a date-boundary loss rather than a join fan-out.

ASQL11 protected review signals

Close this page before the changed retry

Strong signal

Correctness is proven first; EXPLAIN evidence is interpreted cautiously; ANALYZE is used only knowing it executes; result parity is maintained after any index experiment.

IF YOUR QUERY RAN BUT YOU CANNOT PROVE THIS

Treat the skill as Developing. A plausible SQL result without independent row/key/total evidence is not senior-level mastery.

Changed retry

Inspect a join with a different selectivity pattern.

ASQL12 protected review signals

Close this page before the changed retry

Strong signal

Header contract, named stages, deterministic output, separate validations, interpretation and handoff are all present.

IF YOUR QUERY RAN BUT YOU CANNOT PROVE THIS

Treat the skill as Developing. A plausible SQL result without independent row/key/total evidence is not senior-level mastery.

Changed retry

Package a subscription-health analytical query.
