

C2-02 Module QA Report

Advanced SQL - beginner-first RC1 - 2026-09-10

VERDICT

PASS for the available module-level static, route, render and archive-preparation checks. Live PostgreSQL execution is explicitly pending because no PostgreSQL runtime is present in this build environment. Course 2A remains NOT FINAL.

LEARNER-FACING REBUILD

12 lessons rebuilt into a 55-page teacher-led book using the full M01 grammar. Actual page starts reconcile 12/12: ASQL1 p6, ASQL2 p10, ASQL3 p14, ASQL4 p18, ASQL5 p22, ASQL6 p26, ASQL7 p30, ASQL8 p34, ASQL9 p38, ASQL10 p42, ASQL11 p46, ASQL12 p50.

PRACTICE / REVIEW

Runnable lab setup + 12 independent P-ASQL tasks + two cumulative Mini-Labs + 13-page protected lesson review + three targeted repair SQL files. Every lesson requires expected grain and an independent validation before mastery.

DIALECT SAFETY

PostgreSQL 18/current documentation is authoritative. The preserved Alex The Analyst video is MySQL-oriented visual support only and is never required for assessment.

C2-02 QA - Gates and SQL integrity

Fresh assessment topology and static controls

GATE FRESHNESS

Gate A Marketplace Seller Performance, Gate B Support SLA / Reopen Analysis, Gate C Subscription Billing / Payment Reliability. Each uses a separate schema/domain/data set with different duplicate/orphan/event-grain traps. B/C remain protected full reassessments.

CRITICAL-FAIL RULE

Wrong or unexplained result grain, join fan-out, lost orphan rows, denominator mismatch, unsafe time boundary, repeated-logic-only validation or unresolved material reconciliation blocks pass even if the SQL executes.

STATIC SQL QA

10 SQL files were scanned after line-comment removal. Quote balance PASS, parenthesis balance PASS, and statement terminator presence PASS across all generated SQL files. This is structural QA, not execution proof.

LIVE RUNTIME BOUNDARY

No psql/PostgreSQL runtime is available here. Therefore schema creation, query execution, EXPLAIN behavior and final live-result parity remain learner-PC/runtime checks before FINAL certification.

C2-02 QA - PDF, sources and release boundary

Observed evidence versus later course-level gates

PDF QA

Six PDFs totaling 77 pages were rendered at 200 DPI. Five contact sheets were visually inspected; no clipping, overlap, broken glyph or page-route drift was observed. All six PDFs preflight as openable, unencrypted and text-based.

SOURCE / VIDEO QA

19 exact lesson/source rows across 12 unique external URLs. PostgreSQL 18/current documentation and the Alex video title/timestamps were rechecked on the web on 2026-09-10. External required dependencies = 0.

MENTOR HANDOFF

The module now has an exact route contract for the future common eight-tab Mentor: Today | Learn | Course | Repair | Evidence | Jobs | Reports | Settings. The Mentor itself is intentionally not rebuilt piecemeal before the full C2A registry is ready.

PARALLEL-BUILD BOUNDARY

No shared GitHub repository or backup is modified. After byte freeze, the next isolated module is C2-03 Professional Power BI Modeling.
