

C2-03 Module QA Report

Professional Power BI Modeling - beginner-first RC1 - 2026-09-10

VERDICT

PASS for available module-level static, render, workbook-import, formula scan and archive CRC checks. Live Power BI Desktop behavior remains explicitly pending; Course 2A remains NOT FINAL.

LEARNER-FACING REBUILD

10 canonical PBM-A lessons rebuilt into a 47-page teacher-led book using the full M01 grammar. Actual starts reconcile 10/10: A1 p6, A2 p10, A3 p14, A4 p18, A5 p22, A6 p26, A7 p30, A8 p34, A9 p38, A10 p42.

PRACTICE / ASSESSMENT

Practice/evidence workbook + 11-file model-data pack + Parcel Delivery Mini-Lab + 11-page protected practice review + 5 targeted remediation cards + three fresh Gate families with separate five-file data packs.

RUNTIME HONESTY

This environment cannot execute Power BI Desktop. Relationship propagation, role-playing date behavior and Performance Analyzer evidence are therefore learner-PC/runtime gates before FINAL certification.

C2-03 QA - workbook, PDF and Gate evidence

What was actually observed

WORKBOOK QA

All 5 XLSX files re-open through artifact_tool and return zero formula-error matches. Mastery, many-to-many, Mini-Lab QA, Gate A Tasks and Gate A Model QA ranges were rendered and visually inspected.

PDF QA

Eight pre-report PDFs totaling 74 pages were rendered at 200 DPI. Teaching/review/other-PDF contact sheets were visually inspected. PDF preflight returned zero warnings. No clipping, overlap, broken glyph or page-route drift was observed.

GATE FRESHNESS

A = Retail Sales & Returns; B = Clinic Encounters & Billing; C = Logistics Shipments & Service Targets. Distinct domains/data. Each contains its own dirty one-side key, unknown fact key, multi-fact grain, date roles and higher-grain target risk. B/C are protected.

CRITICAL FAIL

Duplicate one-side key ignored, casual M:M/Both, mixed grain, unknown facts silently removed, wrong date role, target fan-out or failed material reconciliation blocks Gate pass.

C2-03 QA - sources, PL-300 and release boundary

Current 2026 alignment without certification-cram distortion

SOURCE / VIDEO QA

17 lesson/source rows across 12 unique URLs. Chandoo's 2024 modeling video and Power Query video plus current Microsoft modeling/Power Query references were rechecked on the web 2026-09-10. External required dependencies = 0.

PL-300 ALIGNMENT

Current Microsoft study guide measures Model the data at 25-30% and explicitly includes role-playing dimensions, relationship cardinality/cross-filter direction, a common date table, and model-performance optimization. C2-03 maps these objectives but remains a professional BI module, not exam-only notes.

MENTOR HANDOFF

Exact future eight-tab route is frozen: Today | Learn | Course | Repair | Evidence | Jobs | Reports | Settings. The Mentor must open one exact page/task and preserve attempt-before-review, changed retry, Gate and runtime-blocked state.

PARALLEL RULE

No shared GitHub or backup is modified. C2-04 can start only after this module package passes final CRC/hash/re-extraction checks.
