

C2-04 Gate A Protected Review

SaaS Revenue & Customer Success - open only after saved independent attempt

OBJECTIVE FIXTURE CONTROLS

subscriptions=110 | billing rows=330 | target rows=9 | snapshot rows=9 | multi user regions=2

STRONG ATTEMPT

The learner respects Subscription/Billing/Target/Snapshot + Region RLS, builds layered DAX with explicit period/denominator/snapshot logic, proves detail/total/slicer behavior, creates a decision-first report, tests interaction and accessibility, validates dynamic security identities, and records a defensible release/lifecycle plan.

CRITICAL FAILURES

Wrong DAX context at total/subtotal; period/window definition not controlled; snapshot/target fact summed at wrong grain; critical conclusion hidden only in color/tooltip; RLS not identity-tested; users granted unsafe access by convenience; refresh/change ownership absent; protected review opened before saved attempt.

Gate A competency routing

Repair only the weak competency, then prove it on changed evidence

COMPETENCY FLOORS

1 Evaluation/filter/row context. 2 CALCULATE/iterator/context transition reasoning. 3 Time and rolling-period correctness. 4 Advanced business measure totals/denominators/semi-additivity. 5 Debug/regression discipline. 6 Executive narrative. 7 Interaction usability. 8 Accessibility. 9 RLS identity tests. 10 Workspace/distribution/refresh lifecycle.

PASS PHILOSOPHY

No percentage gaming. One unresolved critical semantic, security, accessibility or operational-release failure blocks the Gate even when many formulas and visuals are correct.

NEXT ROUTE

Gate B is a different Support Operations full reassessment and remains hidden until explicitly assigned.
