

C2-04 Protected Practice Review

OPEN ONLY AFTER THE MATCHING ATTEMPT IS SAVED

HOW TO USE

Compare reasoning and evidence, not exact DAX syntax. Preserve the first attempt. Close this review before changed retry. If a value/page/security test is wrong, repair the weak competency rather than copying a finished solution.

CRITICAL FAILURES

Measure works only in one context; total/subtotal untested; denominator/date role wrong; accessibility-critical information only in tooltip/color; RLS untested or bypassed conceptually; lifecycle access/refresh ownership missing; protected review opened before genuine attempt.

QUALITY RULE

A correct screenshot is not enough. DAX needs context/regression evidence; report UX needs user-path evidence; security needs identity tests; lifecycle needs ownership/access evidence.

DAX1 protected review signals

Close this page before the changed retry

Strong signal

You identify every filter reaching a specific visual cell and prove three predicted values in a reduced test visual.

IF THE OUTPUT LOOKS RIGHT BUT THIS EVIDENCE IS MISSING

Treat the lesson as Developing. Do not upgrade status because the formula, visual or service screen looks professional.

Changed retry

Trace Product + Month + Region context.

DAX2 protected review signals

Close this page before the changed retry

Strong signal

You can distinguish stored row-context calculations from interactive filter-context measures and prove slicer behavior.

IF THE OUTPUT LOOKS RIGHT BUT THIS EVIDENCE IS MISSING

Treat the lesson as Developing. Do not upgrade status because the formula, visual or service screen looks professional.

Changed retry

Customer classification + interactive measure.

DAX3 protected review signals

Close this page before the changed retry

Strong signal

You can say exactly which filter CALCULATE adds/replaces and validate a same-column filter case.

IF THE OUTPUT LOOKS RIGHT BUT THIS EVIDENCE IS MISSING

Treat the lesson as Developing. Do not upgrade status because the formula, visual or service screen looks professional.

Changed retry

Status + Region context change.

DAX4 protected review signals

Close this page before the changed retry

Strong signal

Iterator table/grain is explicit and a small manual row calculation matches SUMX/AVERAGEX output.

IF THE OUTPUT LOOKS RIGHT BUT THIS EVIDENCE IS MISSING

Treat the lesson as Developing. Do not upgrade status because the formula, visual or service screen looks professional.

Changed retry

AVERAGEX customer-level value.

DAX5 protected review signals

Close this page before the changed retry

Strong signal

You locate the actual row context and explain when CALCULATE/model-measure evaluation transitions it to filters.

IF THE OUTPUT LOOKS RIGHT BUT THIS EVIDENCE IS MISSING

Treat the lesson as Developing. Do not upgrade status because the formula, visual or service screen looks professional.

Changed retry

Product row + margin measure.

DAX6 protected review signals

Close this page before the changed retry

Strong signal

Date table, active date role and period boundaries are valid; first/zero/missing periods are tested.

IF THE OUTPUT LOOKS RIGHT BUT THIS EVIDENCE IS MISSING

Treat the lesson as Developing. Do not upgrade status because the formula, visual or service screen looks professional.

Changed retry

Fiscal prior-period calculation.

DAX7 protected review signals

Close this page before the changed retry

Strong signal

Base/prior/delta/% are visible separately; rolling window and period completeness are documented and checked.

IF THE OUTPUT LOOKS RIGHT BUT THIS EVIDENCE IS MISSING

Treat the lesson as Developing. Do not upgrade status because the formula, visual or service screen looks professional.

Changed retry

Quarter-over-quarter margin.

DAX8 protected review signals

Close this page before the changed retry

Strong signal

Variables have meaningful names, one intermediate can be returned for debugging, and result parity is proven.

IF THE OUTPUT LOOKS RIGHT BUT THIS EVIDENCE IS MISSING

Treat the lesson as Developing. Do not upgrade status because the formula, visual or service screen looks professional.

Changed retry

Refactor rolling measure.

DAX9 protected review signals

Close this page before the changed retry

Strong signal

Contribution denominator, target grain and closing-balance date behavior are explicit; totals/subtotals are tested.

IF THE OUTPUT LOOKS RIGHT BUT THIS EVIDENCE IS MISSING

Treat the lesson as Developing. Do not upgrade status because the formula, visual or service screen looks professional.

Changed retry

Margin share + monthly target + closing customer balance.

DAX10 protected review signals

Close this page before the changed retry

Strong signal

You reproduce one wrong cell, identify the first wrong intermediate/context, repair one cause and rerun regression states.

IF THE OUTPUT LOOKS RIGHT BUT THIS EVIDENCE IS MISSING

Treat the lesson as Developing. Do not upgrade status because the formula, visual or service screen looks professional.

Changed retry

Prior-period bug instead of contribution %.

DAX11 protected review signals

Close this page before the changed retry

Strong signal

One page leads from decision -> headline -> driver/exception -> action; every visual answers a written question.

IF THE OUTPUT LOOKS RIGHT BUT THIS EVIDENCE IS MISSING

Treat the lesson as Developing. Do not upgrade status because the formula, visual or service screen looks professional.

Changed retry

Support backlog executive page.

DAX12 protected review signals

Close this page before the changed retry

Strong signal

Tooltip, drillthrough and bookmark each serve different user questions; back/reset and saved state are tested.

IF THE OUTPUT LOOKS RIGHT BUT THIS EVIDENCE IS MISSING

Treat the lesson as Developing. Do not upgrade status because the formula, visual or service screen looks professional.

Changed retry

Product detail interaction flow.

DAX13 protected review signals

Close this page before the changed retry

Strong signal

No critical information depends only on color/hover/mouse; titles, alt text, focus order, keyboard flow and sort are tested.

IF THE OUTPUT LOOKS RIGHT BUT THIS EVIDENCE IS MISSING

Treat the lesson as Developing. Do not upgrade status because the formula, visual or service screen looks professional.

Changed retry

Audit drillthrough page accessibility.

DAX14 protected review signals

Close this page before the changed retry

Strong signal

RLS is treated as model security, mapping grain is controlled, and multiple identities including unknown/multi-region are tested.

IF THE OUTPUT LOOKS RIGHT BUT THIS EVIDENCE IS MISSING

Treat the lesson as Developing. Do not upgrade status because the formula, visual or service screen looks professional.

Changed retry

Team-based dynamic RLS.

DAX15 protected review signals

Close this page before the changed retry

Strong signal

Builders/consumers, workspace/app/share path, semantic-model access, refresh owner and republish impact are all explicit.

IF THE OUTPUT LOOKS RIGHT BUT THIS EVIDENCE IS MISSING

Treat the lesson as Developing. Do not upgrade status because the formula, visual or service screen looks professional.

Changed retry

Shared semantic model consumed from another workspace.
