

Remediation 1 - Context / CALCULATE

Use only for the weak competency

WHEN TO USE

Measures change unexpectedly or learner cannot explain total/filter behavior.

TARGETED REPAIR

Use a tiny Category x Region matrix. Show base, filtered and denominator measures. Trace filters before changing DAX; test same-column overwrite and one changed slicer.

PASS SIGNAL

Pass when predictions match detail and total states and the learner can explain context without memorized phrases.

Remediation 2 - Iterator / context transition

Use only for the weak competency

WHEN TO USE

SUMX/AVERAGEX or measure-inside-iterator logic is copied without row-grain understanding.

TARGETED REPAIR

Build a 5-row fact example plus customer iterator. State iterator table/grain, row context, transition point and manual control.

PASS SIGNAL

Pass when manual and measure outputs match and transition is located correctly.

Remediation 3 - Time / rolling

Use only for the weak competency

WHEN TO USE

Prior or rolling values are plausible but period/date-role rules are unclear.

TARGETED REPAIR

Use governed Date table; show base/prior/delta/% side by side; test first period, missing/zero period and exact rolling dates.

PASS SIGNAL

Pass when period contract and boundary controls are explicit.

Remediation 4 - Business measures / debugging

Use only for the weak competency

WHEN TO USE

Contribution/target/snapshot measure is wrong at total or learner changes random DAX.

TARGETED REPAIR

Expose base/intermediate/denominator measures, reproduce the failing cell, fix only first wrong context and run regression tests.

PASS SIGNAL

Pass when total/subtotal and changed slicers remain correct.

Remediation 5 - Report UX / accessibility

Use only for the weak competency

WHEN TO USE

Page is attractive but decision unclear, interaction confusing or critical meaning depends on hover/color.

TARGETED REPAIR

Redesign one decision-first page, test drillthrough/back/bookmark, remove color-only meaning, add titles/alt/focus checks.

PASS SIGNAL

Pass when a reviewer understands action quickly and keyboard/non-hover access preserves critical meaning.

Remediation 6 - RLS / lifecycle

Use only for the weak competency

WHEN TO USE

Security or publishing process is assumed rather than tested/owned.

TARGETED REPAIR

Build a user mapping with single/multi/unknown identities, test roles, then create a builder/consumer/refresh/change-impact release matrix.

PASS SIGNAL

Pass when data access and operational ownership are explicit and tested where runtime exists.
