

C2-05 Protected Practice Review

OPEN ONLY AFTER THE MATCHING GENUINE ATTEMPT

HOW TO USE

Compare contracts and evidence, not exact code text. Preserve the original attempt. If weak, close this review, repair the specific competency and solve the changed retry without reopening it.

CRITICAL ANTI-CHEAT RULE

A reviewed/corrected script is not mastery. Clean-start execution, validation, failure handling and changed transfer are the evidence. Never use this review during Gate A/B/C.

MODULE SAFETY SIGNALS

No hidden notebook state; no uncontrolled file glob; no silent dtype coercion; no lost lineage; no unverified Excel output; no wrong JSON grain; no API without timeout/status handling; no swallowed critical error; no publish after failed validation; no duplicate rerun; no run without reproducibility evidence.

PYA1 protected review signals

Close this page before the changed retry

Strong signal

Runs from a clean process; main() orchestrates explicit functions/paths; missing input fails before final output; unchanged rerun does not duplicate business rows.

IF THE CODE RAN BUT THIS EVIDENCE IS MISSING

Treat the competency as Developing. A clean-looking notebook, output file or log is not enough if the underlying run cannot be validated/repeated safely.

Changed retry

Move input/output location through config/arguments only.

PYA2 protected review signals

Close this page before the changed retry

Strong signal

Functions have one responsibility, explicit inputs/returns/failure behavior and normal + edge tests; no hidden global DataFrame dependency.

IF THE CODE RAN BUT THIS EVIDENCE IS MISSING

Treat the competency as Developing. A clean-looking notebook, output file or log is not enough if the underlying run cannot be validated/repeated safely.

Changed retry

Add a new channel alias without touching discovery/reporting.

PYA3 protected review signals

Close this page before the changed retry

Strong signal

Dates/numerics are parsed deliberately; malformed values cannot silently become trusted rows; calculation reconciles at row and aggregate level.

IF THE CODE RAN BUT THIS EVIDENCE IS MISSING

Treat the competency as Developing. A clean-looking notebook, output file or log is not enough if the underlying run cannot be validated/repeated safely.

Changed retry

Different row order plus new malformed numeric.

PYA4 protected review signals

Close this page before the changed retry

Strong signal

Expected/actual file scope is compared before load; schemas checked; lineage preserved; combined rows equal per-file contributions; backup/drift not silently included.

IF THE CODE RAN BUT THIS EVIDENCE IS MISSING

Treat the competency as Developing. A clean-looking notebook, output file or log is not enough if the underlying run cannot be validated/repeated safely.

Changed retry

Different directory and approved month count.

PYA5 protected review signals

Close this page before the changed retry

Strong signal

Raw/template remains unchanged; new workbook uses stable sheet/columns; saved file is re-read; rows/categories/totals reconcile to pandas source.

IF THE CODE RAN BUT THIS EVIDENCE IS MISSING

Treat the competency as Developing. A clean-looking notebook, output file or log is not enough if the underlying run cannot be validated/repeated safely.

Changed retry

New region appears without hard-coded Excel row logic.

PYA6 protected review signals

Close this page before the changed retry

Strong signal

Output grain is declared before flattening; nested item count reconciles; parent IDs retained; optional field absence is explicit.

IF THE CODE RAN BUT THIS EVIDENCE IS MISSING

Treat the competency as Developing. A clean-looking notebook, output file or log is not enough if the underlying run cannot be validated/repeated safely.

Changed retry

One customer optional field is missing.

PYA7 protected review signals

Close this page before the changed retry

Strong signal

Offline local JSON path proves parser; live wrapper has explicit timeout + status check + bounded exception translation; secrets absent.

IF THE CODE RAN BUT THIS EVIDENCE IS MISSING

Treat the competency as Developing. A clean-looking notebook, output file or log is not enough if the underlying run cannot be validated/repeated safely.

Changed retry

Base URL/endpoint changes through config.

PYA8 protected review signals

Close this page before the changed retry

Strong signal

Specific errors add useful file/rule context; broad swallowed exceptions absent; critical quality failure blocks output; quarantine/fail decisions are visible.

IF THE CODE RAN BUT THIS EVIDENCE IS MISSING

Treat the competency as Developing. A clean-looking notebook, output file or log is not enough if the underlying run cannot be validated/repeated safely.

Changed retry

New bad record requires explicit quarantine/fail.

PYA9 protected review signals

Close this page before the changed retry

Strong signal

Log reconstructs run stages; validation JSON contains check/status/observed/rule; a critical FAIL is visible and prevents publish; no secrets/noisy row dumps.

IF THE CODE RAN BUT THIS EVIDENCE IS MISSING

Treat the competency as Developing. A clean-looking notebook, output file or log is not enough if the underlying run cannot be validated/repeated safely.

Changed retry

Add one validation rule without rewriting logging.

PYA10 protected review signals

Close this page before the changed retry

Strong signal

One callable workflow orchestrates tested functions; raw inputs immutable; critical checks gate output; second unchanged run reproduces/replaces rather than appends duplicates.

IF THE CODE RAN BUT THIS EVIDENCE IS MISSING

Treat the competency as Developing. A clean-looking notebook, output file or log is not enough if the underlying run cannot be validated/repeated safely.

Changed retry

Reporting period changes in config only.

PYA11 protected review signals

Close this page before the changed retry

Strong signal

Config separated; environment/dependencies recorded; exact inputs identifiable; manifest has rows/checks/output evidence; clean process/root can reproduce.

IF THE CODE RAN BUT THIS EVIDENCE IS MISSING

Treat the competency as Developing. A clean-looking notebook, output file or log is not enough if the underlying run cannot be validated/repeated safely.

Changed retry

Move project root and rerun through root/config change only.
