

C2-06 Gate A Protected Review

Logistics Shipments - open only after saved independent attempt

OBJECTIVE FIXTURE CONTROLS

domain=Logistics Shipments | shipments=100 | events=200 | targets=21 | history change=H03 hub_type on 2026-05-15 | unknown hub=H99

STRONG ATTEMPT

Different processes remain separate facts at declared grains; higher-grain target is modeled independently; business/surrogate key roles and historical change are correct; unknown foreign key is surfaced; layer/replay/store/latency decisions are justified; lineage reaches the consumer KPI; quality checks have severity/owners and blocking failures stop release.

CRITICAL FAILURES

Mixing processes/grains, joining target to transactions, SCD history overwrite when history is required, overlapping/two-current SCD2 versions, unresolved fact FK, layer/store/latency by fashion, incomplete lineage or publication despite unresolved blocking check.

Gate A competency routing

Targeted repair before any fresh full reassessment

COMPETENCY FLOORS

1 Operational/analytical workload reasoning. 2 Warehouse purpose. 3 Fact grain/conformed dimensions. 4 Business/surrogate keys. 5 SCD history. 6 ETL/ELT and layer/replay design. 7 Warehouse/Lakehouse decision. 8 Batch/stream latency. 9 Lineage/metadata. 10 Quality severity/owner/release controls.

PASS PHILOSOPHY

No percentage gaming. One unresolved critical grain/history/FK/reconciliation/release-control failure blocks the Gate even if the architecture presentation is polished.

NEXT ROUTE

Gate B remains protected unless explicitly assigned after repair.
