

C2-06 Protected Practice Review

OPEN ONLY AFTER THE MATCHING ARCHITECTURE ATTEMPT

HOW TO USE

Compare reasoning and controls rather than copying a diagram. Preserve your first design. Close review before changed transfer. If one competency fails, repair that competency rather than restarting the module.

CRITICAL FAILURES

Mixed or unstated fact grain; higher-grain targets multiplied; business/surrogate keys confused; SCD2 overlap/two current rows; fact linked to wrong history version; no layer/replay contract; storage/latency chosen by fashion; lineage incomplete; failed critical quality check allowed to publish.

CORE PRINCIPLE

A diagram with many boxes is not architecture evidence. You must explain what one row means, what history is preserved, who owns freshness and which independent checks make each layer trustworthy.

DWF1 protected review signals

Close this page before the changed retry

Strong signal

You classify by actual transaction/scan/history/latency workload and identify freshness/lineage risk after analytical copying.

IF YOUR DIAGRAM LOOKS GOOD BUT THIS EVIDENCE IS MISSING

Treat the lesson as Developing. Visual complexity cannot compensate for an unstated grain, history rule, latency assumption, owner or quality control.

Changed retry

Hospital appointment booking versus capacity analytics.

DWF2 protected review signals

Close this page before the changed retry

Strong signal

OLTP/OLAP reasoning cites row/write/concurrency/history/query shape; normalized operational design is not dismissed as bad.

IF YOUR DIAGRAM LOOKS GOOD BUT THIS EVIDENCE IS MISSING

Treat the lesson as Developing. Visual complexity cannot compensate for an unstated grain, history rule, latency assumption, owner or quality control.

Changed retry

Bank transfers versus regulatory analytics.

DWF3 protected review signals

Close this page before the changed retry

Strong signal

Warehouse design begins with business processes/consumers and includes ownership, load/freshness, history and governed presentation—not a raw source-table dump.

IF YOUR DIAGRAM LOOKS GOOD BUT THIS EVIDENCE IS MISSING

Treat the lesson as Developing. Visual complexity cannot compensate for an unstated grain, history rule, latency assumption, owner or quality control.

Changed retry

Healthcare operations warehouse.

DWF4 protected review signals

Close this page before the changed retry

Strong signal

Every fact has a stated grain; Sales/Support/Targets or equivalent different processes remain separate; conformed dimensions connect compatible facts.

IF YOUR DIAGRAM LOOKS GOOD BUT THIS EVIDENCE IS MISSING

Treat the lesson as Developing. Visual complexity cannot compensate for an unstated grain, history rule, latency assumption, owner or quality control.

Changed retry

Clinic encounters, billing and staffing targets.

DWF5 protected review signals

Close this page before the changed retry

Strong signal

Business key identifies source entity; surrogate key identifies warehouse version; facts can resolve to the correct version while lineage preserves the business key.

IF YOUR DIAGRAM LOOKS GOOD BUT THIS EVIDENCE IS MISSING

Treat the lesson as Developing. Visual complexity cannot compensate for an unstated grain, history rule, latency assumption, owner or quality control.

Changed retry

Cross-source Product SKU collision.

DWF6 protected review signals

Close this page before the changed retry

Strong signal

Attribute-level Type1/Type2 policy is justified; SCD2 has surrogate key/effective ranges/current flag; no overlaps/two-current rows; event date resolves exactly one version.

IF YOUR DIAGRAM LOOKS GOOD BUT THIS EVIDENCE IS MISSING

Treat the lesson as Developing. Visual complexity cannot compensate for an unstated grain, history rule, latency assumption, owner or quality control.

Changed retry

Product Category history.

DWF7 protected review signals

Close this page before the changed retry

Strong signal

You document where transformation/validation occurs, what raw data is retained and where replay starts; ETL/ELT label follows the actual design.

IF YOUR DIAGRAM LOOKS GOOD BUT THIS EVIDENCE IS MISSING

Treat the lesson as Developing. Visual complexity cannot compensate for an unstated grain, history rule, latency assumption, owner or quality control.

Changed retry

Sensitive HR data with stricter raw-landing rule.

DWF8 protected review signals

Close this page before the changed retry

Strong signal

Landing/Staging/Core/Presentation each has input/grain/allowed transforms/guarantee/owner; downstream reports avoid unstable landing dependencies; replay path is explicit.

IF YOUR DIAGRAM LOOKS GOOD BUT THIS EVIDENCE IS MISSING

Treat the lesson as Developing. Visual complexity cannot compensate for an unstated grain, history rule, latency assumption, owner or quality control.

Changed retry

Source schema drift incident.

DWF9 protected review signals

Close this page before the changed retry

Strong signal

Warehouse/Lakehouse/Both follows data/query/engineering/transaction/governance needs; no technology chosen by prestige.

IF YOUR DIAGRAM LOOKS GOOD BUT THIS EVIDENCE IS MISSING

Treat the lesson as Developing. Visual complexity cannot compensate for an unstated grain, history rule, latency assumption, owner or quality control.

Changed retry

Retail structured BI plus clickstream JSON.

DWF10 protected review signals

Close this page before the changed retry

Strong signal

Maximum useful decision latency is stated before batch/micro-batch/streaming choice; recovery, late events, downstream capability and cost/complexity are considered.

IF YOUR DIAGRAM LOOKS GOOD BUT THIS EVIDENCE IS MISSING

Treat the lesson as Developing. Visual complexity cannot compensate for an unstated grain, history rule, latency assumption, owner or quality control.

Changed retry

Stock replenishment + customer notification.

DWF11 protected review signals

Close this page before the changed retry

Strong signal

Lineage crosses source -> transformation -> core -> semantic/report -> KPI and includes owner/freshness/business meaning; impact analysis is possible.

IF YOUR DIAGRAM LOOKS GOOD BUT THIS EVIDENCE IS MISSING

Treat the lesson as Developing. Visual complexity cannot compensate for an unstated grain, history rule, latency assumption, owner or quality control.

Changed retry

Product Category rename/change impact.

DWF12 protected review signals

Close this page before the changed retry

Strong signal

Checks are distributed by layer and include rule/observed/status/severity/owner/action; blocking failures prevent release; first broken stage can be isolated.

IF YOUR DIAGRAM LOOKS GOOD BUT THIS EVIDENCE IS MISSING

Treat the lesson as Developing. Visual complexity cannot compensate for an unstated grain, history rule, latency assumption, owner or quality control.

Changed retry

Late file + overlapping SCD2 rows.
