

C2-06 Module QA Report

Data Warehousing & Platform Foundations - beginner-first RC1 - 2026-09-10

VERDICT

PASS for available module-level static, PDF render/preflight, workbook-import/formula, archive and route preparation QA. Core mastery has no Fabric-tenant dependency. The unified Course 2A Mentor and whole-course release simulation remain pending; Course 2A is NOT FINAL.

LEARNER-FACING REBUILD

12 canonical DWF lessons rebuilt into a 55-page teacher-led book using the full M01 grammar. Exact starts reconcile 12/12: DWF1 p6 through DWF12 p50. The former compressed learner-facing structure is not being patched.

PRACTICE / MINI-LAB

Practice workbook contains 12 lesson sheets plus source inventory, SCD2 sandbox, pipeline quality plan and evidence/mastery controls. The 8-file FleetCare source pack feeds a separate cumulative Warehouse Design Mini-Lab.

VERY HIGH DE BRIDGE

This module deliberately deepens grain, SCD history, ETL/ELT, layering, storage choice, latency, lineage and quality. Direct DA-to-DE learners receive the required fast-track counterpart in C2B rather than being forced through C2A.

C2-06 QA - assessments and rendered evidence

Fresh Gates, controlled history defects and workbook inspection

WORKBOOK QA

All five XLSX workbooks re-open through artifact_tool and return zero formula-error matches. Mastery tracker, SCD2 sandbox, quality plan, Mini-Lab architecture and Gate A lineage/quality sheets were rendered and visually inspected.

PDF QA

Eight pre-report PDFs totaling 85 pages were rendered at 200 DPI. All eight preflight as openable, unencrypted and text-based. Two PDF contact sheets plus one workbook contact sheet were inspected with no clipping, overlap, broken glyph or route drift observed.

GATE FRESHNESS

A = Logistics Shipments (100 shipments / 200 events / Hub history); B = E-commerce Returns (110 orders / 15 returns / Seller history); C = Clinic Appointments (95 appointments / 63 billing rows / Provider history). Each adds a higher-grain target and a different unmatched key.

CRITICAL FAIL

Mixed fact grain, target fan-out, wrong SCD versioning, unresolved foreign key, missing replay/lineage or publication after a blocking quality failure prevents Gate pass.

C2-06 QA - current sources and course boundary

Durable warehousing concepts plus refreshed 2026 Fabric examples

SOURCE / VIDEO QA

13 source/video registry rows across 12 unique URLs. The baseline Fabric dimensional-modeling, SCD Type1/2, lakehouse and storage-decision references are preserved. Current medallion, lineage and warehouse-learning guidance plus the batch-vs-streaming visual were rechecked on 2026-09-10.

CURRENT FABRIC BOUNDARY

Current Microsoft guidance recommends medallion architecture for Fabric lakehouses and distinguishes Warehouse, Lakehouse and other stores by workload. C2-06 uses those only as implementation examples; durable layer, grain, history, latency and quality reasoning remains internal-course authority.

MENTOR / COURSE POSITION

Exact future Mentor route is frozen for Today | Learn | Course | Repair | Evidence | Jobs | Reports | Settings. Course 2A remains optional; C2B B04 owns the required DA-to-DE bridge version. C2-07 owns deeper Fabric/workspace/identity/gateway/governance operations.

PARALLEL RULE

No shared GitHub repository or backup integration is modified. C2-07 begins only after final C2-06 CRC/hash/re-extraction freeze.
