

C2-07 Protected Practice Review

OPEN ONLY AFTER THE MATCHING GENUINE ATTEMPT

HOW TO USE

Compare enterprise reasoning and evidence, not UI screenshots. Preserve your original attempt. Close the review before the changed retry. If a live tenant feature is unavailable, compare the deterministic design/runbook evidence instead.

CRITICAL FAILURES

Admin/Contributor granted to consumers by convenience; tenant/workspace/capacity confused; direct unvalidated PROD editing; missing gateway/credential/freshness ownership; RLS treated as all security; production access not reviewed; incident repeatedly retried without root cause/downstream validation; vague engineer handoff.

LIVE-UI RULE

A screenshot of a green Fabric/Power BI page cannot prove architecture mastery. The evidence must state who owns the resource, what is allowed, what can fail, how it is validated and what happens next.

CLD1 protected review signals

Close this page before the changed retry

Strong signal

Tenant, workspace, capacity, items and OneLake have distinct roles; cloud responsibility is divided between Microsoft-managed service and organization-owned access/data/governance/cost decisions.

IF THE UI LOOKS RIGHT BUT THE CONTROL IS MISSING

Treat the lesson as Developing. A polished Service/Fabric screen does not compensate for unsafe access, missing ownership, unclear freshness or unvalidated deployment.

Changed retry

Consulting company with client-isolated workspaces.

CLD2 protected review signals

Close this page before the changed retry

Strong signal

Identity -> resource -> action -> minimum permission/credential is explicit; compute health, item permission, source credentials and data security are diagnosed separately.

IF THE UI LOOKS RIGHT BUT THE CONTROL IS MISSING

Treat the lesson as Developing. A polished Service/Fabric screen does not compensate for unsafe access, missing ownership, unclear freshness or unvalidated deployment.

Changed retry

Leaver removed through groups/service identities.

CLD3 protected review signals

Close this page before the changed retry

Strong signal

Fabric workload selection follows ingest/transform/store/stream/report needs and omits unnecessary workloads; shared platform/OneLake relationship is explained.

IF THE UI LOOKS RIGHT BUT THE CONTROL IS MISSING

Treat the lesson as Developing. A polished Service/Fabric screen does not compensate for unsafe access, missing ownership, unclear freshness or unvalidated deployment.

Changed retry

Remove streaming and simplify architecture.

CLD4 protected review signals

Close this page before the changed retry

Strong signal

Authoritative item/workspace ownership is clear; copy vs shortcut/share has a reason; OneLake does not erase security boundaries.

IF THE UI LOOKS RIGHT BUT THE CONTROL IS MISSING

Treat the lesson as Developing. A polished Service/Fabric screen does not compensate for unsafe access, missing ownership, unclear freshness or unvalidated deployment.

Changed retry

Add external cloud source and choose copy vs shortcut.

CLD5 protected review signals

Close this page before the changed retry

Strong signal

Builders and consumers use different access/distribution routes; authoritative semantic model, app/share decision, support owner and endorsement/trust path are explicit.

IF THE UI LOOKS RIGHT BUT THE CONTROL IS MISSING

Treat the lesson as Developing. A polished Service/Fabric screen does not compensate for unsafe access, missing ownership, unclear freshness or unvalidated deployment.

Changed retry

External guest/partner consumption under policy review.

CLD6 protected review signals

Close this page before the changed retry

Strong signal

DEV/TEST/PROD separation, validation, impact, approver, deployment and post-release smoke/rollback exist; failed TEST cannot reach PROD.

IF THE UI LOOKS RIGHT BUT THE CONTROL IS MISSING

Treat the lesson as Developing. A polished Service/Fabric screen does not compensate for unsafe access, missing ownership, unclear freshness or unvalidated deployment.

Changed retry

TEST failure blocks Region-definition release.

CLD7 protected review signals

Close this page before the changed retry

Strong signal

Each source has cloud/on-prem path, gateway need, credential owner, schedule and business freshness check; technical success is not confused with fresh business data.

IF THE UI LOOKS RIGHT BUT THE CONTROL IS MISSING

Treat the lesson as Developing. A polished Service/Fabric screen does not compensate for unsafe access, missing ownership, unclear freshness or unvalidated deployment.

Changed retry

06:00 credential-expiry incident.

CLD8 protected review signals

Close this page before the changed retry

Strong signal

Workspace/item/model/data controls are layered; least privilege/groups/access review exist; RLS is not used as substitute for broad item/workspace security; governance owner is explicit.

IF THE UI LOOKS RIGHT BUT THE CONTROL IS MISSING

Treat the lesson as Developing. A polished Service/Fabric screen does not compensate for unsafe access, missing ownership, unclear freshness or unvalidated deployment.

Changed retry

Leaver plus temporary external auditor.

CLD9 protected review signals

Close this page before the changed retry

Strong signal

Incident starts with business impact; exact failed job/error/time and first broken dependency are identified; recovery reruns downstream validation and prevention has an owner.

IF THE UI LOOKS RIGHT BUT THE CONTROL IS MISSING

Treat the lesson as Developing. A polished Service/Fabric screen does not compensate for unsafe access, missing ownership, unclear freshness or unvalidated deployment.

Changed retry

Job green but source incomplete/stale.

CLD10 protected review signals

Close this page before the changed retry

Strong signal

Business impact, expected/observed, dataset/item/grain, lineage point, requested technical action and acceptance validation are sufficient for another role to act.

IF THE UI LOOKS RIGHT BUT THE CONTROL IS MISSING

Treat the lesson as Developing. A polished Service/Fabric screen does not compensate for unsafe access, missing ownership, unclear freshness or unvalidated deployment.

Changed retry

Schema-deprecation migration request.
