

C2-07 Module QA Report

Cloud / Fabric / Enterprise BI - beginner-first RC1 - 2026-09-10

VERDICT

PASS for available module-level static, rendered-PDF, workbook, archive, route and duplicate/orphan QA. Live tenant execution remains optional and unclaimed. Unified Course 2A Mentor and whole-course simulation remain pending, so Course 2A is NOT FINAL.

LEARNER-FACING REBUILD

All 10 CLD lessons were rebuilt into a 47-page teacher-led book using the full M01 grammar. Exact lesson anchors now reconcile 10/10 from CLD1 p6 through CLD10 p42, directly removing the old CLD1 and CLD10 route defects.

PRACTICE / MINI-LAB

The deterministic NorthStar pack has 9 fixture files plus an enterprise operations workbook with P_CLD1-P_CLD10, evidence/mastery controls, access risks and failure fixtures. A separate NorthStar deployment Mini-Lab integrates topology, access, DEV/TEST/PROD, refresh, governance, monitoring and handoff.

OPTIONAL LIVE RUNTIME

A Fabric/Power BI tenant can add live evidence but cannot block or replace the deterministic mastery path. Missing tenant feature is ENVIRONMENT BLOCKED, never a fabricated PASS.

C2-07 QA - Render, workbook and assessment evidence

What was mechanically checked

PDF QA

Eight pre-report PDFs totaling exactly 75 pages were rendered at 200 DPI. All eight preflight as openable, unencrypted and text-based. Three complete contact sheets were visually inspected with no clipping, overlap, broken glyph or page-route drift observed.

WORKBOOK QA

Five XLSX files re-open through artifact_tool with zero formula-error matches. The practice workbook contains all ten required P_CLD lesson sheets. Representative Mastery, Access Risk, Operations, Mini-Lab Deployment and Gate A Release/Refresh ranges were rendered and visually inspected.

ARCHIVE / ROUTE QA

Practice ZIP = 9 entries CRC PASS. Gate A/B/C ZIPs = 5 entries each CRC PASS. All 26 required staged paths exist; no duplicate basenames were found. All 10 teaching headings match their registry pages and all ten practice-sheet routes exist.

GATE FRESHNESS

A = Fleet Maintenance; B = Education Enrollment; C = Energy Metering. Each changes sources, personas, failed release and incident conditions. B/C remain protected.

C2-07 QA - sources, PL-300 and release boundary

Current 2026 platform behavior is separated from durable course reasoning

SOURCE / VIDEO QA

21 exact source/video rows across 21 unique URLs; 18 baseline resource/visual rows are preserved. Current Fabric/OneLake/workspaces/CI-CD/gateway/governance/monitoring and PL-300 references were rechecked for the 2026 rebuild. External required dependency = 0.

PL-300 ALIGNMENT

CLD5-CLD8 directly reinforce current Manage and Secure Power BI skills: workspaces/apps/distribution, gateway/scheduled refresh, workspace/item/model access, RLS and sensitivity labels. Deployment-engineering and monitoring depth is professional enrichment, not falsely labeled as required exam content.

COURSE / MENTOR BOUNDARY

C2-07 remains optional enterprise depth and cannot block Course 1 -> C2B -> C3. The future unified Mentor route contract is frozen for Today | Learn | Course | Repair | Evidence | Jobs | Reports | Settings, but app synchronization waits until C2-08/C2-09 are also frozen.

PARALLEL RULE

Shared GitHub/backup integration remains untouched. Next release action is C2-07 hash/CRC/re-extraction freeze, then C2-08.
