

C2-08 Module QA Report

Senior Business Analysis & Communication - beginner-first RC1

VERDICT

PASS for available module-level static, PDF-render, workbook, archive, lesson-route and orphan/duplicate QA. The unified Course 2A Mentor and whole-course release simulation remain pending; Course 2A is NOT FINAL.

LEARNER-FACING REBUILD

12 canonical SBA lessons rebuilt into a 55-page teacher-led book using the full M01 grammar. Exact starts reconcile 12/12 from SBA1 p6 through SBA12 p50, replacing the old learner-facing route defects rather than patching them.

PRACTICE / MINI-LAB

The deterministic practice layer includes 8 case/evidence files, 12 matching P_SBA sheets, decision/evidence/mastery controls and the RiverCart Management Review Simulation. Written evidence is the assessed minimum; voice/role-play is optional.

NO INVENTED REAL-WORLD KNOWLEDGE

If a case omits evidence, the learner must identify the missing question and owner. Guessing industry facts, hiding uncertainty or producing senior-sounding prose without evidence does not pass.

C2-08 QA - Render, workbook and assessment evidence

What was mechanically checked

PDF QA

Eight pre-report PDFs totaling exactly 85 pages rendered at 200 DPI. Three complete contact sheets were visually inspected with no visible clipping, overlap, broken glyph or page-route drift. The initial bulk-render timeout was resolved by smaller batches and was not a file defect.

WORKBOOK QA

All five XLSX workbooks re-open through artifact_tool with zero formula-error matches. Representative Mastery, O/I/R, Conflict, Mini-Lab Executive Summary and Gate A Defense/Handoff ranges rendered cleanly. All 12 P_SBA practice sheets exist.

ARCHIVE / ROUTE QA

Practice ZIP = 8 entries CRC PASS. Gate A/B/C data ZIPs = 4 entries each CRC PASS. All 26 required staged paths exist, 12/12 lesson headings match their registered pages, 12/12 practice-sheet routes exist, and no duplicate basenames were found.

GATE FRESHNESS

A Marketplace Sellers, B Inventory Replenishment, C Customer Success Renewals. Each uses different stakeholders, evidence limitations, constraints and non-negotiables. B/C remain protected.

C2-08 QA - sources, PL-300 and course boundary

Professional judgment remains broader than exam memorization

SOURCE / VIDEO QA

12 exact source/video rows across 12 unique URLs. The legacy rule of zero required external dependency is preserved. Current Microsoft stakeholder/business-alignment material and selected interviewing/storytelling visuals are additive only.

PL-300 ALIGNMENT

Current PL-300 audience expectations include meaningful business value, understandable visualizations, business-stakeholder requirements and collaboration with analytics/data engineers. C2-08 deepens those behaviors, but most senior communication/mentoring content is correctly classified as professional enrichment.

COURSE / MENTOR BOUNDARY

C2-08 is optional Senior/BI professional depth and cannot block Course 1 -> C2B -> C3. The module Mentor route contract is frozen for the common eight-tab shell, but actual app synchronization waits until C2-09 and the final course registry are complete.

PARALLEL RULE

Shared GitHub/backup integration remains untouched. Next: hash/CRC/re-extraction freeze C2-08, then rebuild C2-09.
