

C2-09 Final Gate B - Healthcare Network Operations

Fresh integrated Senior/BI capability assessment

DECISION

Which clinics/processes need intervention next month without confusing scheduled volume, completed care and claims realization?

DEFINITION / OPERATING CONFLICT

Operations counts completed appointment status | Clinical lead requires valid visit completion | Finance counts submitted/paid claims
Injected failure: Claims rerun after a three-day delay contains rows already present in the initial load. Naive append duplicates claims before executive republish.

INDEPENDENCE

This is not Meridian repeated. Use only this case packet and your own reasoning. Protected reviews remain closed until the complete Gate attempt is saved.

Final Gate B - Required evidence

All critical floors, no percentage gaming

PART A - ANALYTICAL ARCHITECTURE

Clarify decision/definitions; state source/fact grains; design one high-risk SQL KPI plus independent validation; model relationships/date roles + two DAX/KPI measures; one automation/reproducibility component; warehouse/cloud/Fabric/access implications.

PART B - TRUST / OPERATIONS / COMMUNICATION

Blocking/warning checks and source-to-published reconciliation; recover injected failure; explain safe retry/idempotency; <=8-line executive summary with action/owner/limitation/next evidence; handoff/runbook; defend one rejected alternative.

CRITICAL PASS RULE

Any unresolved grain, validation/reconciliation, security/privacy, truthfulness, independent reasoning or unsafe rerun failure blocks the Gate. Final Gate pass still does not automatically unlock DE training.
