

C2-09 Final Gate B Protected Review

Healthcare Network Operations - open only after complete saved Gate attempt

OBJECTIVE FIXTURE CONTROLS

domain=Healthcare Network Operations | clinics=8 | appointments=120 | claims initial=60 | claims rerun rows=14 | claims rerun overlap=8 | target rows=16

STRONG ATTEMPT

Decision/definition owners explicit; all source/fact grains safe; SQL/model/DAX/automation designs are valid and independently checked; blocking/warning quality controls exist; injected failure is diagnosed to first broken dependency; rerun is safe/idempotent; least privilege/privacy respected; executive action matches evidence/uncertainty; handoff is operable.

CRITICAL FAIL

Fact fan-out; silent definition choice; green job treated as business correctness; duplicate/stale rerun; broad access/privacy breach; causal overclaim; no reproducible control; protected-answer contamination.

Gate B competency routing

Repair only weak competencies before a fresh retest

FLOORS

Decision/definitions; grain/architecture; SQL; model/DAX; automation/reproducibility; data quality/reconciliation; enterprise security/operations; failure/rerun safety; executive recommendation; documentation/handoff; independent reasoning/truthfulness.

PASS PHILOSOPHY

No percentage gaming. Every critical floor must be defensible. If Gate A fails one area, repair that area and use the protected Gate B fresh case; if needed use Gate C after another targeted repair.

NEXT ROUTE

Gate C is the next full fresh assessment only if targeted repair is required.
