

C2-09 Final Gate C - Logistics Marketplace

Fresh integrated Senior/BI capability assessment

DECISION

Which lanes/carrier segments are creating fragile growth, and what should operations/commercial leadership change next quarter?

DEFINITION / OPERATING CONFLICT

Sales uses booked shipments/value | Operations uses delivered-on-time events | Finance uses invoiced/collected freight
Injected failure: Late delivery-event batch arrives after KPI publication. A naive rerun appends event-derived output instead of replacing/reconciling, duplicating delivered counts.

INDEPENDENCE

This is not Meridian repeated. Use only this case packet and your own reasoning. Protected reviews remain closed until the complete Gate attempt is saved.

Final Gate C - Required evidence

All critical floors, no percentage gaming

PART A - ANALYTICAL ARCHITECTURE

Clarify decision/definitions; state source/fact grains; design one high-risk SQL KPI plus independent validation; model relationships/date roles + two DAX/KPI measures; one automation/reproducibility component; warehouse/cloud/Fabric/access implications.

PART B - TRUST / OPERATIONS / COMMUNICATION

Blocking/warning checks and source-to-published reconciliation; recover injected failure; explain safe retry/idempotency; <=8-line executive summary with action/owner/limitation/next evidence; handoff/runbook; defend one rejected alternative.

CRITICAL PASS RULE

Any unresolved grain, validation/reconciliation, security/privacy, truthfulness, independent reasoning or unsafe rerun failure blocks the Gate. Final Gate pass still does not automatically unlock DE training.
