C2-09 PL-300 Changed Retest Protected Review

Original course-written questions; not Microsoft exam items

R01 - Prepare - Correct: A

A model currently imports 50M rows nightly from a supported Fabric OneLake Delta source. The team wants to reduce copy/refresh while retaining supported direct lake behavior.

A DirectLake | B Append | C Paginated report | D Workspace Viewer

Why:

Use DirectLake when the source/scenario supports it and the goal fits the mode.

Objective: Storage mode

R02 - Prepare - Correct: A

A helper query performs standard cleaning and should feed three final queries. You want upstream changes inherited.

A Reference the helper query | B Duplicate three times | C Use a measure | D Use RLS

Why:

Reference keeps downstream queries based on the helper result.

Objective: Reference queries

C2-09 PL-300 Changed Retest Protected Review

Original course-written questions; not Microsoft exam items

R03 - Prepare - Correct: A

Two country files have identical columns and should form one global table.

A Append | B Merge | C Drillthrough | D Calculation group

Why:

Append stacks rows.

Objective: Append

R04 - Prepare - Correct: A

A customer master has duplicate CustomerID values before a fact merge. Best action?

A Validate/fix key uniqueness before the merge | B Use many-to-many automatically | C Apply DISTINCT after the final report | D Ignore duplicates

Why:

Dimension/business key integrity should be resolved before relationships/merges.

Objective: Keys/data quality

C2-09 PL-300 Changed Retest Protected Review

Original course-written questions; not Microsoft exam items

R05 - Prepare - Correct: A

A JSON order has nested customer and item objects. Your target is one row per item.

A Expand/normalize nested data and preserve parent keys | B Convert JSON to screenshot | C Use a bookmark | D Create an app

Why:

Semi-structured data must be normalized to the intended grain.

Objective: Semi-structured

R06 - Model - Correct: A

Sales has many ProductID rows and DimProduct has one unique row per ProductID.

A One-to-many dimension-to-fact | B Many-to-many | C One-to-one | D No relationship

Why:

Unique dimension to repeated fact.

Objective: Cardinality

C2-09 PL-300 Changed Retest Protected Review

Original course-written questions; not Microsoft exam items

R07 - Model - Correct: A

A calculation must respond to slicers. Use:

A Measure | B Static column text | C Sensitivity label | D Gateway

Why:

Measures respond to filter context.

Objective: Measures

R08 - Model - Correct: A

A slow report contains unused high-cardinality text columns in a large fact.

A Remove unnecessary columns after validation | B Add more columns | C Make all filters bidirectional | D Duplicate table

Why:

Unneeded rows/columns increase model size/cost.

Objective: Performance

C2-09 PL-300 Changed Retest Protected Review

Original course-written questions; not Microsoft exam items

R09 - Model - Correct: A

Same Date table needs OrderDate and DeliveryDate analysis.

A Role-playing date relationships with explicit measure logic | B Duplicate every fact row | C Convert dates to category text | D Use app audiences

Why:

Role-playing dimensions support multiple date roles.

Objective: Role-playing date

R10 - Model - Correct: A

You want reusable Current/Prior/YoY calculation logic across many base measures.

A Calculation group | B Gateway | C Bookmark | D Sensitivity label

Why:

Calculation groups centralize reusable calculation transformations.

Objective: Calculation groups

C2-09 PL-300 Changed Retest Protected Review

Original course-written questions; not Microsoft exam items

R11 - Visualize - Correct: A

You need category comparison across 12 regions.

A Bar chart | B Pie chart with 12 slices | C Gauge | D Card only

Why:

Bars support ordered category comparison.

Objective: Visual choice

R12 - Visualize - Correct: A

A report needs keyboard/readability support and meaningful status indicators.

A Accessibility design plus labels/contrast/reading order | B Color only | C Remove titles | D Increase animation

Why:

Accessibility is an explicit report-design responsibility.

Objective: Accessibility

C2-09 PL-300 Changed Retest Protected Review

Original course-written questions; not Microsoft exam items

R13 - Visualize - Correct: A

Users need to inspect the selected customer's transactions on a detail page.

A Drillthrough | B Append | C Gateway | D Sensitivity label

Why:

Drillthrough passes selected context to a detail page.

Objective: Drillthrough

R14 - Visualize - Correct: A

A printed regulatory detail must repeat headers and preserve exact pagination.

A Paginated report | B Scatter plot | C Quick measure | D Workspace role

Why:

Paginated is designed for print-perfect multi-page output.

Objective: Paginated

C2-09 PL-300 Changed Retest Protected Review

Original course-written questions; not Microsoft exam items

R15 - Visualize - Correct: A

An AI-generated summary states revenue rose 12%, but the selected filter shows 8%.

A Correct/verify before use | B Publish anyway | C Hide the filter | D Change model to match AI

Why:

AI narratives must be validated against actual context.

Objective: Copilot verification

R16 - Manage - Correct: A

Consumers need a polished monthly report but no edit rights.

A App/audience or appropriate consume-only route | B Contributor | C Admin | D Service principal deploy permission

Why:

Distribution should separate consumer from builder access.

Objective: Apps/distribution

C2-09 PL-300 Changed Retest Protected Review

Original course-written questions; not Microsoft exam items

R17 - Manage - Correct: A

A cloud model cannot reach a private SQL Server.

A Configure appropriate on-premises gateway/connection | B Add a bookmark | C Unpivot data | D Create a calculation group

Why:

Gateway addresses supported on-prem/private connectivity.

Objective: Gateway

R18 - Manage - Correct: A

A user can open a report but should see only South region rows.

A RLS role/group membership | B Workspace Admin | C Sensitivity label alone | D Deployment stage

Why:

RLS restricts rows for authorized users.

Objective: RLS

C2-09 PL-300 Changed Retest Protected Review

Original course-written questions; not Microsoft exam items

R19 - Manage - Correct: A

One external auditor needs a specific approved report only.

A Use the narrowest supported item/share access under policy | B Make them Member of all finance workspaces | C Disable security | D Export all data publicly

Why:

Least-privilege item/share access is preferred.

Objective: Item access

R20 - Manage - Correct: A

A confidential semantic model must carry organizational classification.

A Apply appropriate sensitivity label/policy | B Use a pie chart | C Disable Date table | D Append queries

Why:

Sensitivity labels support information governance.

Objective: Sensitivity labels
