

C2-09 C2A-to-DE Readiness Check

OPTIONAL transfer evidence - does not override C2B/C3 entry

IMPORTANT PATH BOUNDARY

Course 2A is optional. The direct DA -> DE route remains Course 1 -> C2B Bridge -> Course 3. This C2A check is only an evidence summary for learners who completed C2A and want to understand transferable strength.

READINESS FLOORS

Advanced SQL ≥ 3 ; Python automation ≥ 3 ; Data modeling ≥ 3 ; Warehousing ≥ 3 ; Data quality ≥ 3 ; Independent analysis ≥ 3 ; Cloud/Fabric ≥ 2 ; Professional ownership ≥ 2 on the 0-4 evidence scale.

WHAT PASS MEANS

Your C2A evidence is strong enough to support DE prerequisite discussion and reduces some conceptual gaps. It does NOT mean Data Engineer job-ready and does not silently skip the official C2B/C3 handoff.

C2A transfer evidence - how to assess

Use evidence IDs, not course completion percentages

EVIDENCE SCALE

0 none | 1 guided | 2 independent basic | 3 independent professional | 4 can review/mentor. Every score must point to a saved artifact/validation/failure or sanitized workplace example.

CRITICAL CONDITION

No unresolved critical grain, validation, data-integrity or truthfulness weakness. If one area fails, repair that exact area. Do not restart C2A and do not treat PL-300 as a substitute.

NEXT ROUTE

If your goal is Data Engineering, continue through the official C2B Bridge/C3 prerequisites. Use this matrix to target gaps in SQL, Python, warehousing, quality and ownership rather than to claim a Data Engineer title.
